

Left ver.5 / Right ver.7

MD600

MORIWAKI DREAM

MORIWAKI ENGINEERING and MORIWAKI RACING are now preparing fast for the supply of the originally developed racing machine, MD600, toward those racing teams who are intending to participate in the forthcoming World Grand Prix Series, Moto2, while continuing to further develop the machine along with enlarging factory capability for stable and efficient product supply. These two prototypes are versions #5 and #7, which were developed under different technical objectives.

The ver.5 had been through many tests to improve basic performance and those obtained test data forms the basis of ver.7, aiming not only raising the basic potential of the machine but also having in mind, the mass production model.

We are excited and we will continue our development so as to provide a machine with enough potential to win world championships when it starts. The development of the final version MD600 is now ongoing.

Specification

DIMENSION	2,000mm		
ENGINE	HONDA CBR600RR PC40E ※1 Water cooled 4-stroke/DOHC/4valve/4cylinder		
FRAME	MORIWAKI original • Aluminium Head pipe •••••••• Variable caster angle and position Pivot •••••••• Variable position		
SWINGARM	MORIWAKI original / Aluminium		
SUSPENSION	KYB	COWLING	MRF
WHEEL	marchesini	BRAKE	NISSIN

※1 Development is ongoing with Honda engine (SS kit) (as of August 26, 2009)
